In the orchard we monitor (Cone Grove area) codling moth degree days are currently at 700. So far, we have not observed an increase in trap activity suggesting no "1B" activity yet for that location. Additional Codling Moth info is available at the UC IPM website <http://www.ipm.ucdavis.edu>.

We set the first biofix for NOW at 5/26 and have trapped eggs on 5/30,6/2 and 6/5. So that will start the model for NOW.
