Codling moth Degree Days are at 1215 in the Orchard we monitor. It looks like we might have a third CM biofix on 7/23 but trap catches have been too low to verify. Additional Pest management information for Codling moth is available at the UC IPM website <http://www.ipm.ucdavis.edu>. Watch walnut husk fly traps carefully and treat when you find first females with eggs. We have been finding females with eggs in the 3 orchards we monitor. So Keep your eye on the females.
